AΩ

THE OLYMPUS ECOSYSTEM

SOVEREIGN AI INFRASTRUCTURE

*One grid. Any provider, any device, any deployment surface.
Software that runs where it is owned — not where it is hosted.*

7% IMPACT ROYALTY

A protocol-level tithe on every dollar earned. Non-negotiable at every layer.

CLOUDPREMISE LLC

I. THE THESIS

AΩ

Not a product. An agent primitive layer.

Where AWS built the cloud primitive layer — compute, storage, networking — Olympus builds the agent primitive layer: consciousness, authorization, action, memory, and orchestration. Once the layer is complete the AI no longer needs traditional integrations. It needs endpoints. Poseidon connects. Athena acts. Proteus stores. Hermes routes. Ares protects.

The platform is the integration, the middleware, and the application layer, unified under a single sovereign architecture that runs identically across every deployment context on Earth — from a Raspberry Pi to global AWS mesh, with zero code changes between contexts.

31 / 31

services online

64

endpoints operational

0

outages across 30+ apps

“The grid dissolves the boundary between local and global compute. The interface remains identical regardless of where the intelligence lives.”

II. THE FIVE PILLARS

Five surfaces, one sovereign architecture. Tap any link to enter.

1

OLYMPUS-GRID

The control plane

The Salesforce-native operating system for sovereign AI. A single architecture that replaces MuleSoft, Okta, Jira, LangChain and Terraform — control plane on Salesforce, data plane on customer-owned AWS. Agent Infrastructure as a Service.

➤ olympus-grid.com

➤ [Iris portal — app.olympus-grid.com](https://iris.portal.app.olympus-grid.com)

2

OLYMPUS-616

The living fleet

The reference deployment — the pantheon brought online. Boots from a zip file; 27 agent-capable gods awaken on their own with staggered spawn, per-god backoff and self-healing respawn. Production on AWS, off-grid on solar Mac Minis.

➤ github.com/olympus-616

3

TURTLESHELL.AI

The consumer gateway

The sovereign consumer AI platform — web, iPhone, Salesforce utility bar, and off-grid. Build agents in the cloud, then migrate to your own hardware. Foundation-governed, carrying the mandatory 7% tithe into every account at signup.

➤ turtleshell.ai

II. THE FIVE PILLARS (CONT.)

COSMOS-LOGOS

The security thesis

The sealed-envelope protocol for agent discovery and transport. OAuth tokens are sealed to a Poseidon server's X25519 public key before the model is ever called — the LLM is a blind relay and never sees a credential. Ed25519 / X25519.

➔ github.com/cosmos-logos

GUARDIANS OF OLYMPUS

The story engine

Code-named Omens — a generative-AI storybook game for children, built in Godot with C#. It teaches identity through the logos principles that the whole pantheon is named for. The myth made playable.

THE DEPLOYMENT, END TO END

1

Managed package

2

Fargate cluster

3

Eos smoke test

4

GPT app access

5

Sovereign node

III. THE PANTHEON

Mythology is load-bearing navigation, not branding. At the scale of 22+ services, the Greek naming is how the architect moves through the grid. Each god is a domain.

⬡ Athena	LLM routing / consciousness	⬡ Orion	async orchestration
⬡ Poseidon	MCP connectors & tools	⬡ Aeon	parallel agent kernel
⬡ Hermes	API bus, messaging, cloud infra	⬡ Mnemosyne	memory system
⬡ Proteus	multi-cloud data abstraction	⬡ Zeus	architecture control plane
⬡ Ares	edge security, JWT at boundary	⬡ Apollo	text-to-speech
⬡ Iris	React portals on Salesforce	⬡ Hephaestus	asset forge
⬡ Gate	universal identity federation	⬡ Argos	logging & observability
⬡ Eos	CI/CD, smoke tests	⬡ Oracle	login
⬡ Plutus	billing & entitlements	⬡ Hecate	end-to-end encryption
⬡ Chronos	process / BPM	⬡ Thoth	writing system / scribe

Two open protocols bind them: COSMOS-LOGOS (agent discovery & sealed-envelope cryptography) and GOAT — the Grid Ontology for Agent Transport. Both released as sovereign specifications, designed to propagate independently of any single company.

IV. WHAT IT REPLACES

A component-by-component replacement analysis, against enterprise equivalents and four years of integrated refinement.

COMPONENT	DOMAIN	REPLACES	REPLACEMENT COST
Hermes	API + service bus	MuleSoft	\$0.3M – \$0.8M
Proteus	multi-cloud ORM	Custom ORM	\$0.5M – \$1.5M
Orion	async orchestration	Step Functions	\$0.2M – \$0.5M
Chronos	business process mgmt	Jira / BPM	\$0.4M – \$1.0M
Aeon	agent kernel	—	\$0.5M – \$2.0M
Iris	portal framework	IBM WebSphere	\$0.5M – \$1.5M
Gate	identity provider	Okta / Auth0	\$0.2M – \$0.5M
Athena	LLM routing	LangChain	\$0.3M – \$1.0M
Poseidon	MCP server	Zapier / Boomi	\$0.3M – \$1.0M
Eos	CI/CD	Jenkins	\$0.1M – \$0.3M

TOTAL REPLACEMENT COST

integration + four years of refinement included

\$5.2M - \$16.6M

Strategic value within the Salesforce ecosystem is estimated at \$10M–\$50M, with platform potential at scale reaching \$50M–\$200M+ — implemented natively inside the platform whose comparable capabilities were bought for \$6.5B (MuleSoft) and \$27.7B (Slack).

AΩ

Seven percent, off the top, forever.

Every dollar the ecosystem earns — consumer and enterprise alike — carries a mandatory 7% tithe. It is not a marketing gesture and not a campaign. It is written at the protocol level, load-bearing to the product identity, and structurally difficult for incumbents to copy. At signup, every account chooses one cause.

Save the Oceans

Restoration and protection of marine ecosystems.

Clean Water for All

Access to safe drinking water where it is scarce.

AI Assistance to Those in Need

Putting sovereign AI in the hands of the underserved.

Governance sits with the Olympus Foundation, not the company. Sovereignty is the thesis — the tithe, off-grid deployment and bring-your-own-key architecture all flow from the same principle: software runs where it is owned.

“I will sell it a billion times if that is what the work is for. The impact compounds with every one.”
